TRAOUKI YOUNES

Data Scientist & AI Engineer specializing in optimization, machine learning, and scalable AI systems. Experienced in designing end-to-end solutions for logistics and industrial use cases, including routing optimization and real-time computer vision systems.

SKILLS

- Data Analysis
- Deep Learning
- Data Visualization
- Machine Learning
- Data Engineering & Automation
- Full-Stack Development
- Reinforcement Learning

TECHNICAL SKILLS

- **AI & ML:** Deep Learning, Reinforcement Learning, Computer Vision, NLP, RAG
- **Tools & Platforms:** Kafka, Docker, Git, LabelImg, Tensorflow, AWS, etc.
- **Languages :** Python, SQL, JavaScript, HTML, CSS, C++, C, Bash, R

LANGUAGES

- English (Fluent)
- French (Fluent)
- Arabic (Native)
- Spanish (Beginner)

WORK EXPERIENCE

R.I.M Telecom, Casablanca AUGUST 2025 – PRESENT

Developer and Data Scientist

Contributing to the development and optimization of a Transportation Management System (TMS) using data-driven and AI-based approaches. Processed and structured large-scale IoT fleet data to generate actionable insights, building dashboards and visualizations to monitor operations. Designed and implemented VRP optimization models to improve fleet efficiency and route planning. Improved system performance and contributed to scalable backend integration.

Centrale Danone, Casablanca JANUARY 2025 - AUGUST 2025

Data Science and AI Intern

Designed and optimized a Transportation Management System (TMS) (TMS) with modules including incident management, access control, billing, and logistics optimization.Designed intelligent route optimization tools under real-world constraints such as accessibility, product type, and collection frequency. Built a simulation environment for decision support using reinforcement learning concepts. Backend responsibilities include implementing REST APIs, database queries, and Excel exports, while also developing interactive frontend components using React.

TWD Services JUNE 2024 - SEPTEMBER 2024

Data Science and AI Intern

Developed a real-time defect detection system using YOLOv8 for industrial quality control, an IP camera, and Kafka for streaming data. Responsibilities included collecting and labeling image data ,training models, and optimizing detection accuracy to identify good vs. defective buns. Additionally, contributed to the initial planning of an internal chatbot project, providing ideas on integrating a PDF-based knowledge base for employee support.

EDUCATION

Baccalaureate with Option in Physics-Chemistry 2019 - 2020
CSKP, Casablanca

DEUST – Diploma in Science and Technology 2020 - 2022
FSTM, Mohammedia

Bachelor's Degree in Science and Technology – Applied Mathematics 2022 - 2023
FSTM, Mohammedia

Master's Degree in Data Science and Artificial Intelligence 2023 - 2025
Mundiapolis University, Nouacer

ACHIEVEMENTS

HPC Hackathon – UM6P, Ben Guerir DECEMBER 2024
First Prize Winner

- Optimized GEMM (General Matrix Multiplication) for dense matrices using C and CUDA.
- Implemented cuBLAS, tiling, streams, and batched processing to accelerate GPU computation.
- Key contributions:
  - Ran GEMM on CPU and GPU.
  - Implemented a tiled GEMM version with streams and batches.
  - Built a custom solution using shared memory for maximum efficiency.

ENSA Khouribga – CROMEK 7th Edition MAY 2024
First Prize Winner

- Designed an autonomous race car to navigate a mini-city with complex elements: road signs, parking zones, bridges, and construction areas.
- Used deep learning for object detection (signs, lines), and C++ for line following and decision logic.
- Integrated AI and traditional control to achieve robust, real-time navigation.

NXP Cup Qualifications APRIL 2024
3rd Place

- Built a line-following algorithm in C++ to navigate a track with black lines on white background.
- Used ultrasonic and IR sensors to enhance path detection and adjust steering precision.
